# GURLEY MODELS LA18, LA20, LA25, AND LA35 ABSOLUTE LINEAR ENCODERS

MOTION TYPE:

LINEAR

**USAGE GRADE:** 

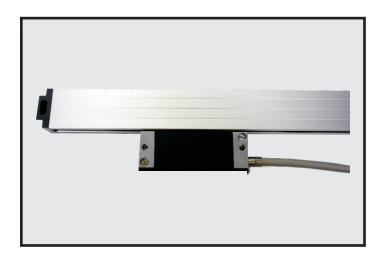

INDUSTRIAL

OUTPUT:

**ABSOLUTE** 

MAX RESOLUTION:

о.5 то 8µм

## HIGH RESOLUTION - INDUSTRIAL RUGGEDNESS

The Models LA18, LA20, LA25 and LA35 are optical absolute linear encoders designed for long life in medium to high-performance applications. The compact LA18 offers measuring lengths up to 1.2 m (48"); the almost-as-compact LA20 measures up to 1.5 m (60"); and the more robust LA25 and LA35 have a maximum measuring length of 2.0 m (80"). All models have a reliable internal ASIC to provide resolution as fine as 0.5µm in SSI format. The output protocol is RS422 / binary SSI based on SP490.

Precision ball bearings allow the reading head to traverse the glass scale at speeds up to 1 m/s (40 in/s). The system is protected to IP53 by an aluminum extrusion and rubber sealing flaps. The encoder has a unique virtual absolute scale but there is no necessity to have an initialization movement thus it generates a true absolute position, which is available immediately after applying the power supply.

Each output code represents only one measuring position.

## **SPECIFICATIONS**

	See note	LA18	LA20	LA25	LA35		
Cross-section, mm (in)		18 x 63 (0.71 x 2.48)	20 x 68 (0.79 x 2.68)	25 x 69 (0.98 x 2.72)	35 x 79 (1.38 x 3.11)		
Measuring length ML, mm (in)		70-1240 70-1540 (3-48) (3-60)		70-1940 (3-80)	1140-2040 (45-80)		
Overall length, mm (in)			ML + 114	(ML + 4.5)			
Weight, kg (lb)		0.12 + 0.7/m (0.28 +0.03/in)	0.12 + 1.1/m (0.28 +0.05/in)	0.12 + 1.6/m (0.28 + .09/in)	0.12 + 3.3/m (0.28 + 0.11/in)		
Resolution, µm		0.5, 1, 2, 4 OR 8 μm					
Accuracy (at 20°C)		Grade A: ±3 μm/m (≈ ±36 μin/ft) Grade B: ±5 μm/m (≈ ±60 μin/ft)					
Hysteresis		0.5 µm (20 µin)					
Input power		5V ± 0.25V @ 350 mA max					
Output Device (OD=RS)		SP490 on all channels (RS-422)					
Max speed		1 m/s (40 in/s) at 0.5 micron					
Max acceleration		30 m/s² (1200 in/s²)					
Driving force		1.5 N (6 oz)					
Operating temperature		0° to 50°C (32° to 122°F)					
Sealing		IP53					

## NOTES:

1. Output signals: binary 24 bit max with resolution of 0.5  $\mu$ m on 2 m of length

As part of our continuing product improvement program, all specifications are subject to change without notice.

## SPECIFICATIONS

#### **INPUT POWER**

+5 VDC ±0.25 V @ 350 mA max.

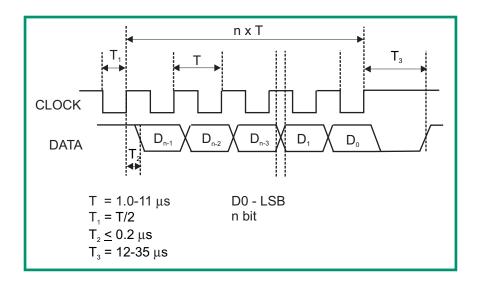

#### **OUTPUT FORMAT**

SSI (Binary Code)

The current value of the position is being transferred bit by bit along the DATA line starting from MSB and is synchronized by signal CLOCK generated at the receiver end.

In starting mode lines CLOCK and DATA are in LOG 1 state. The transmission cycle begins with the first falling edge of the CLOCK, it means that by that time the current position is being maintained and the value is transmitted into line DATA by positive edges of CLOCK.

Afre the transfer of all bits line DATA remains low (LOG 0) for a period of time T3.

#### PINOUTS (DE-9P)

Electrical Signal	Pin	Color
Case	1	Shield/Drain
Clock	2	Yellow
/ Clock	3	Brown
Data	6	Green
/ Data	7	Orange
0V	9	Black
+5V	5	Red

### **DUTLINE AND MOUNTING**

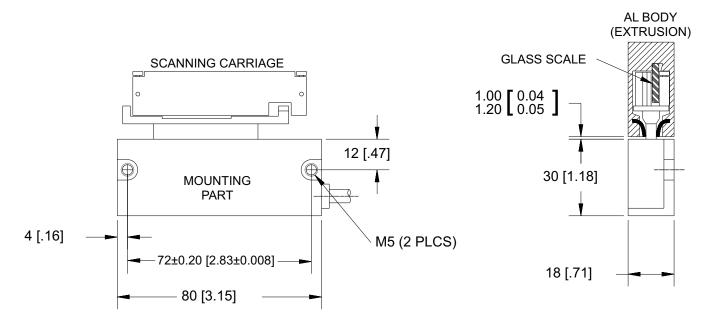

#### **READ HEAD OUTLINE DRAWING**

Encoders LA18/20/25/35 have two main parts: scale installed into an aluminum extrusion and a moving read head along the scale and partially inside of the extrusion.

The read head consists of a scanning carriage (moves inside of the extrusion along the scale) and a mounting outside part of the read head, which supports the electronics circuit board, cable exit and has mounting holes for installation.

The glass scale is installed in the aluminum body and is being held by means of a rubber cylindrical flexible strip. The scale by itself has a two chrome-on-glass patterned tracks: incremental and virtual absolute (pseudorandom).

The scanning carriage of the read head while moving detects the modulation of light defining each time the current code of the true absolute position of the read head, which is available immediately after applying the power supply. Hence, there is no necessity for an additional initialization movement.

#### Notes for linear absolute encoder installation

The encoder should be installed as close as possible to the line of measurement (in measuring equipment) or to the line of cutting (in machine tools).

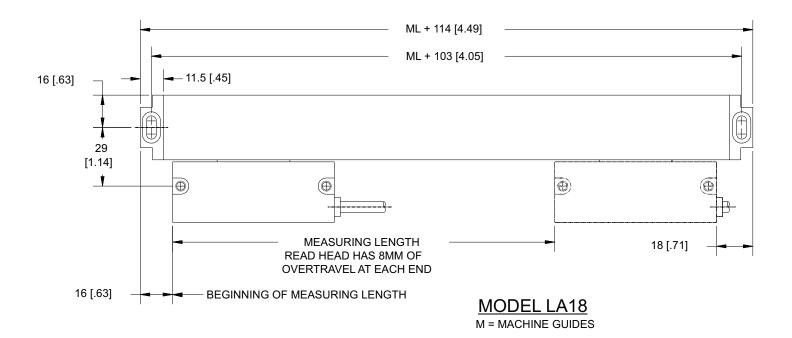

It is recommended that:

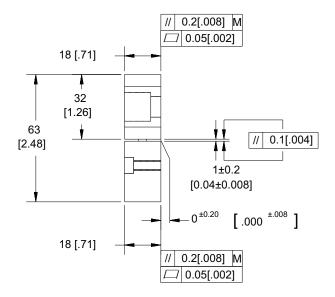

- 1. The body of the encoder be mounted to the moving part of the object and the read head to the stationary part, which allows the cable to be fixed easier.
- 2. The cable to be protected from contamination, metal chips and coolant.
- 3. The encoder be closed with a special cover and put with the Read Head opposite to the zone of cutting (in case of machine tools).
- 4. The gap "A" to be defined by a special shim included with the encoder. Gap deviation depends on the measuring length and is around 0.2 mm for lengths 1 m; 0.02 mm for lengths of 100 mm.

## **SPECIAL CAPABILITIES**

For special situations, we can optimize catalog encoders to provide higher frequency response, greater accuracy, wider temperature range, reduced torque, non-standard line counts, or other modified characteristics. In addition, we regularly design and manufacture custom encoders for user-specific requirements. These range from high-volume, low-cost, limited-performance commercial applications to encoders for military, aerospace and similar high-performance, high-reliability conditions. We would welcome the opportunity to help you with your encoder needs.

#### **WARRANTY**

Gurley Precision Instruments offers a limited warranty against defects in material and workmanship for a period of one year from the date of shipment.
